COMMENTS:

Perusal of these notes conveys the impression that they were made in preparation prior to a conference with Professor Brandt, General Comissar of the Führer for Medicine -- and Health Matters. Remarkable in relation to previous investigations are items #IV and VI. Suggesting that work with gas masks and aerosols may have been under way at Fort Fransecky. This tends to confirm previously expressed ideas about the nature of the chambers and the experimental work done at the Fort. Recent conversation with Dr. Heintz of the physics section of the Medical Research Institute of the Medical Faculty of Strassburg University indicated a close relationship between Professors Brandt and Bickenbach. These and other notes as well letters examined tend to confirm this. It is felt that the relationship between these two permitted Bickenbach inspite of his apparently inferior qualifications as a scientist to organize and set up an elaborate research program and to obtain practically unlimited priorities. Because of his position as personal advisor in medical problems to Hitler, Professor Brandt has been given a number one ALSOS priority as a possible source of information on BW. His address in August 1944 was as follows: Beelitz - Heilstätten C. Berlin.
